Your own remarks:

AMADEUS LOCAL SECURITY

Local Security Administrator	HE LSA.64
-------------------------------------	------------------

The LSA can create and maintain sign banks and security profiles for agents in the office, or in another office if there is an agreement in place.
 The LSA sign always contains a password. To give another sign LSA rights, the LSA attribute must be set to Y. (see "Update agent signs").
 We recommend to create an individual sign for each agent. This enables you to identify the transaction history in PNR's.

Agent Preferences	HE JGD
--------------------------	---------------

The LSA defines which attributes can be updated by the agents themselves.
 (see "Office Defaults")

Display your agent preferences	JGD
Update your preferences (language English, time control mode 24 hours)	JGU/LNG-EN/TCM-24

Display sign / sign bank	HE JCD
---------------------------------	---------------
